

Polymetron 9611 sc Phosphate Analyser

Only two liters of reagent are required for the analyser to perform unattended for up to 90 days. The industry's only pressurized reagent delivery system eliminates the frequent maintenance associated with pumps. Predictive diagnostic tools, including Hach's proprietary Prognosys technology, warning LEDs, and high-visibility notification screens let you avoid unplanned downtime. No more dripping reagents on the instrument, the floor, or your clothing while fumbling with tubes and straws. Simply match the colour-coded cap to the sealed reagent bottle and twist gently. Grab Sample In and Grab Sample Out features allow quick analysis of a grab sample poured into the analyser, and facilitate taking a sample out of the analyzer to verify in a lab test.

Part Number	Reagents included	Power requirements (Voltage)	Measuring range	Parameter	Number of channels	GBP Price
9611.KTO.PX.XXX	Yes	100 - 240 V AC, 24 V DC	LR model: 4 - 3000 µg/L as PO ₄ [Detection range capable of 4 - 5000 µg/L as PO ₄] HR model: 200 - 50000 µg/L as PO ₄		1, 2, 4; programmable sequence	Contact Us
