From the desk of the Managing Director

Dear Research Scholars, Scientists and Trade Partners,

Heartiest Greetings to you.

We present our 2019-2020 Catalog with great enthusiasm. **SRL** has registered very good top-line growth last year and it is our promise to our customers and trade partners that this growth will continue Y-O-Y. The company is marching ahead by implementing strong strategies to operate our ever expanding business operations.

Our theme for this year is to celebrate the 150th anniversary of the discovery of the Periodic Table. It was 150 years ago, that Dmitry Mendeleev, a Russian chemist and inventor designed this unique tool enabling scientist to predict the appearance and properties of matter on the Earth and in the rest of the Universe. The Periodic Table of Chemical Elements is one of the most significant achievements in science, capturing the essence not only of chemistry, but also of physics and biology and hence 2019 is a very auspicious year for all of us which is being called as the "International Year of the Periodic Table of Chemical Elements" (IYPT2019). Celebration for this milestone event has been going on by millions of scientists and researchers world over.

Our 2019-20 catalog has about 400 newly introduced products. Adding niche and specialty products is our strength and we have tried to offer an eclectic mix of new products, which you can see on our website in the newly introduced product section.

We want to thank all customers and trade partners for being a part of our growing family and also helping us to continue our work with a burning desire leading to a sustainable future for all stakeholders involved

Yours sincerely,

S. K. Agarwal

11004 [9004-82-4]	Sodium Lauryl Ether Sulphate (SLES, AES), 28-30% (Sodium laureth sulfate)	2496.00	5lit
SDS (SLS) Biological Detergent			
Sodium lauryl sulfate, referred to as sodium dodecyl sulfate (SDS), is commonly used in preparing proteins for electrophoresis in the SDS-PAGE technique. This compound works by disrupting non-covalent bonds in the proteins, denaturing them, and causing the molecules to lose their native shape (conformation). Also, anions of SDS bind to the main peptide chain (at a ratio of one SDS anion for every two amino acid residues) and this effectively imparts a negative charge that is proportional to the mass or molecular weight of that protein.

Tris Buffer (Tris Base) & Tris Hydrochloride

It is a biological buffer with a buffer range of 7.0 to 9.0. This is the buffer of choice for several in vitro diagnostic assay reagents & buffer systems for agarose and polyacrylamide gel electrophoresis of proteins and nucleic acids. Tris buffer is preferred to phosphate buffer systems due to very low heavy metal content and protection against preservation of enzyme activity under frozen state during lyophilization. It acts as a stable buffer system in the determination of activity of many enzymes.

Linkers & Cross-Linkers for Protein Chemistry

Cross-linking is the process of chemically joining two or more molecules by a covalent bond. SRL introduced linking and cross-linking reagents are important reagents used in protein chemistry applications. Typically, they are commonly used reagents to modify nucleic acids, drugs and solid surfaces. Areas of research where these products find application are bio-conjugation, immobilization, surface modification and bio-molecule labeling. These reagents contain reactive ends to specific functional groups, such as primary amines and sulfhydryls, on proteins or other molecules. The availability of several chemical groups in proteins and peptides make them targets for conjugation and for study using cross-linking methods. Some common applications of cross-linkers is for the identification of near-neighbor protein relationships and for ligand-receptor interactions.

- 3-(Acetamidomethylthio)propanoic Acid (MPA(Acm))
- 3-(Benzylthio)-Propionic Acid
- DABCYL-N-Succinimidyl Ester
- DHP Linker (3,4-Dihydro-2H-Pyran-2-Methanol)
- 5-(Ethylthio)-1H-Tetrazole (ETT)
- HMBA Linker (4-(Hydroxymethyl)benzoic Acid)
- HMPA Linker
- Ramage Linker
- Rink Amide Linker (Knorr Linker)
- Sieber Linker
- Weinreb Linker

Compounds for Peptide Synthesis

Peptide synthesis is characterized as the formation of a peptide bond between two amino acids. While the definition of a peptide is not definitive, it usually refers to chains of up to 30-50 amino acids. Peptide synthesis today is a common approach in even high-throughput biological research and product and drug development, although it is a technique about 100 years old. We offer various types of peptide reagents that can be used for biological production and research work.

Seraloses™

Media for Gel Filtration and Affinity Chromatography

Gel Filtration (Molecular Sieving or Size Exclusion Chromatography) and Affinity Chromatography are rapidly becoming indispensable to biochemists and molecular biologists. Gel Filtration is used for the separation of macromolecules from smaller molecules, for fractionation of mixtures of various biopolymers on the basis of molecular size, for characterizing macromolecules and determining molecular weights and molar masses, for pathological screening of body fluids and for structure determination studies. Affinity Chromatography, besides being put to many of the above uses, is mainly employed for the isolation and purification of biologically active substances like enzymes, antibodies, antigens, lectins, viruses and toxins. Affinity Chromatography has the advantage of being rapid and highly selective.

Seralite Products

Ion Exchange Resins

Our important range of Seralite products is very critical for ion exchange applications. These are acidic/basic exchange resins consisting of different polymers and copolymers. The particle size of these resins is between 20 – 50 mesh and are excellent for cross-linking. Typical application of these resins are for water conditioning, softening and deionisation, removal of recovery of high molecular weight anions, fractional separation of organic acids, amino acids, metals, peptides, inorganic and rare earth metals. They can also be used for the treatment of sugar solutions, amino acids and enzymes. SRL Ion exchange resins are highly recommended products for critical separation work.

19219	Bradford Reagent for Proteins	390.00 1075.00	100ml 500ml

Reagent for the GC analysis of ritalinic acid. Alternative to Cl₂CHCO₂H for synthesis of purine rich oligomers. "Lewis acid used in the preparation of geminal bis-peroxides from ketals and enol ethers with t-butyl hydroperoxide. Reagent used for the mild deacetylation of amines.

Used in the deacetylation of acetanilides. It is also used to study the synthesis of amino group containing cyanine dyes of different types and to prepare fatty acid methyl esters. Boron trifluoride-methanol (BF-M) is an esterification reagent. BF-M is a powerful acidic catalyst for the esterification of the fatty acids. It easily cleaves acetylated dyes resulting in free amino groups. BF-M catalyzed trans esterification of vegetable oils forms biodiesel.

Bradford Reagent has been used to determine total protein concentration.

Intrinsic activity — 0.25 u/mg chymotrypsin, Activates to at least 45 units per mg protein, dialyzed, lyophilized powder			
A serine protease that hydrolyzes peptide bonds with aromatic or large hydrophobic side chains (Tyr, Trp, Phe, Met) on the carboxyl end of the peptide bond. Chymotrypsinogen from bovine pancreas is a zymogen containing 5 disulfide bridges and requires limited proteolysis for its activation. Chymotrypsinogen A may be activated by trypsin and chymotrypsin (autolytic activation) to form α, β, γ, δ, and p chymotrypsin (depending upon the conditions of activation).

FCP Reagent is used for the colorimetric in vitro assay of phenolic and polyphenolic antioxidants. It does not only measure phenols but will react with any reducing substance. It therefore measures the total reducing capacity of a sample, not just phenolic compounds. It also reacts with some nitrogen-containing compounds like hydroxylamine and guanidine. Frequently also used in Food Science applications.

MTT is utilized for the detection of cell viability and cell proliferation studies. Since MTT has a positive charge, it can pass through a cell membrane and is reduced by mitochondria to form a purple color formazan dye. Organic solvents are required to dissolve MTT formazan dyes. MTT is also rapidly reduced to the formazan, which chelates with nickel, copper, and cobalt; the cobalt chelate has been used in oxidative systems.

Use to detect dead and dying cells in cytotoxicity assays and for routine assessment of cell viability. Trypan blue is recommended for use in dye exclusion procedures for viable cell counting. Non-viable cells will up-take trypan blue at a faster rate than viable cells. Used as a vital dye which is especially important because it is taken up by the reticuloendothelial system. Trypan Blue is blue acid dye with a strong affinity for cellulose containing substrates such as cotton; less affinity for proteinaceous materials

Sodium Lauryl Sulphate

A highly versatile product for Drug Dissolution Testing, Quality Control, Research and Electrophoresis applications.

For Drug Dissolution Testing Studies

Sodium Lauryl Sulphate (Sodium Dodecyl Sulphate, SLS, SDS) is a strong component of the media used for Dissolution Testing in In Vitro methods for water-soluble and slightly-water-soluble drugs. It's importance as a simulated gastric/intestinal media ingredient makes it's quality a critical factor in the accuracy of results.

Principally used as a QC Test, Dissolution Testing, SDS of AR & High Purity grades are the most prevalent reagents in use due to constant production improvements, testing and stability studies. SRL is one of the first developers of the High Purity SLS (99.5%) which is fast-becoming the industry standard across the Pharma QC Testing, with many scientists now adopting the newer improved grade as a Protocol standard.

Our Premier Product, Sodium Lauryl Sulphate High Purity (99.5%) (35825) can,

- Eliminate further purification by the customer by foaming & other processes, demonstrate exceptionally lower lauryl alcohol (LA) impurities
- Improve testing accuracy and confirm lot-to-lot bioequivalence
- Ensure consistent and reliable results in In Vitro Testing and Intrinsic Dissolution Rate (IDR) studies
- Secure accurate Dissolution profiles (suitable to fast-release and slow-release drugs)
- Assist in detection of relevant product changes so as to ensure the quality and consistent performance of final products

For SDS Polyacrylamide Gel Electrophoresis (SDS-PAGE) Studies

Primarily used in the denaturing of proteins, Sodium Lauryl Sulphate of high purity and molecular biology grades play a critical role in PAGE electrophoresis techniques as well as SDS Gradient Gel Electrophoresis to,

- Unfold normally buried polypeptide chains while retaining their normal (native) structure
- Bind to difficult regions (hydrophobic regions) within the protein chains
- Induce a predominant negative charge for the subsequent electrophoresis
- Ensure a electrophoretic separation for a large number (and types) of proteins

Microbiological Products

SRL has always been on the forefront of breaking new thresholds, and developing new products for our educational & research based customers. Our expertise in microbiological products extend to all fields of Research, education, environment health & safety studies, life-form evaluations and pharmaceutical & food quality control. This attitude has helped us maintain the loyalty of some of the most prominent microbiologists, pathologists and diagnostic laboratories around the world. We still like to focus on the educational customer segment, for this is the core of creative & developmental science.

We continue to tighten our manufacturing and QC testing practices and are standardizing every aspect of our operational procedures to maintain absolute consistency of our products & services. Our CE certification reinforces our values and perhaps this is one the main reasons that we have a very extensive scientific base in European, Asian, Middle-Eastern and South-East Asian Countries where we compete with global players for our range of microbiology products. The ever-increasing customer confidence is a handsome feather in our cap.

Quality Control

We make sure to use only the best quality of raw materials, packaging material and testing organisms and conduct all stringent testing operations in climate controlled dehumidified facilities for the manufacture & storage of our products.

Our technical team utilizes state-of-the-art manufacturing facilities and periodically up-grade their knowledge base to incorporate newer and more advance testing methods & value-adding processes.

Microbiology like all sciences, is undergoing major revolutions and we are excited to be part of that change.

Because SRL relies only on pure MICROBIOLOGY!

Harmonized Culture Media

In recent years, much of the focus has started shifting to newer methods of microbiological testing, led by the leading international pharmaceutical bodies across the world, namely European Pharmacopoeia, Japanese Pharmacopoeia and US Pharmacopoeia. These new methods include harmonization in microbiological testing and this will greatly simplify drug manufacturing norms.

SRL Harmonized Culture Media are manufactured, formulated, labelled and performance tested in compliance with the new harmonized standards.

SRL is ready to face the challenges of the future, be in Biotech, Pharmaceutical R & D, Diagnostics, or any application or research in Microbiology. We offer this new range of products to cater to the new demands that we will be fulfilling through this range.

Important highlights of our Harmonized Media:

- **The usage of only the Finest Quality of Bacteriological ingredients**
- **Strict quality control of Raw Material testing**

Key	
+	: 90% or more positive in 1 or 2 days.
-	: 90% or more negative.
d	: Different biochemical types.
+ or -	: Majority of strains positive.
- or +	: Majority of strains negative.
w	: Weakly positive.
#	: Certain biotypes of <i>S. flexneri</i> produce gas; cultures of <i>S. sonnei</i> ferment lactose and sucrose slowly and decarboxylate ornithine.
\$: Rare exceptions.
**	: Gas volumes produced by cultures of <i>Serratia</i> , <i>Proteus</i> , and <i>Providencia</i> are small.
!!	: <i>S. typhi</i> , <i>S. choleraesuis</i> , <i>S. enteritidis</i> bioaser, <i>Paratyphi-A</i> and <i>Pullorum</i> and a few others ordinarily do not ferment dulcitol promptly. <i>S. choleraesuis</i> does not ferment arabinose.
(+)	: Delayed positive.
	: Most U.S. strains are indole positive, most strains isolated from Europe are indole negative.

An alternative to animal based peptones is petones from vegetable sources. It is possible to get comparable growth and yield from non-animal based peptones. Due to increasing awareness about TSE/BSE, selection of the correct raw materials has become critical and the use of non-animal based biological ingredients has increased. The entire list of non-animal based ingredients we have are listed here,

Why use regular media?

Use BioVeg!

BioVeg dehydrated media use vegetable sources of nutritional ingredients instead of animal based ingredients. Plant based Peptones are used as replacements for animal based ones.

BioVeg media eliminate the possibility of animal-borne contaminants interfering with accurate microbiological test results. These media formulations are tested for growth promoting properties with various microorganisms and found to be perfect, eco-friendly alternatives of animal based media.

Our BioLit[®] products range encompasses an assortment of DNA, protein markers & ladders; a variety of Taq polymerases; cloning vectors; an array of buffers, reagents & solutions; tools for DNA & protein purifications; and a medley of educational teaching kits. All these products are designed to be highly pure, precise, ready-to-use and have established a niche for their quality, precision and long-term stability.

Over the last few years, we have observed a gradual shift to more “Safe” and “Environmentally Friendly” technologies. In view of these industry developments, our team has introduced an entirely new range of offerings and product combinations suit these customer requirements. Some of the revolutionary products in this section of the catalogue are –

- **FluroBronze Markers/Ladders – Fluorescent DNA ladders & markers**

These special DNA ladders and marker (RTU) packs contain, in addition to tracking dyes, a non-carcinogenic nucleic acid stain for detection of the ladder bands. This nucleic acid stain (FluroBronze Stain) replaces ethidium bromide (a known potential mutagen if not handled carefully) in agarose gel preparation.

- **Restriction Enzymes**

Common and widely used restriction enzymes in appealing pack sizes, such as HindIII, EcoRI, EcoRV, BamHI, KpnI, PvuII, BglI, SmaI, PstI, EcoRV and DraI.

- **Environmentally friendly Combo packs of DNA ladders & markers**

These combo packs contain regular or fluorescent ladders/markers accompanied with a special loading buffer which can be used for other nucleic acid samples.

- **Environmentally friendly Stains and dyes**

We introduced the “environmentally friendly” SafeDye Stain and observed ecstatic feedback and response from our environmentally aware and health conscious researchers. We are now excited to introduce another stain (FluroBronze Stain) which is mixed, not with the agarose but with nucleic acid samples. This helps in minimizing the mix of stains with the agarose or the buffer and helps us in our stride towards a safer scientific world.

- **Ready-to-use buffers**

To help students and first-time researchers we bring ready-to-use Gel Mixes for SDS-PAGE analysis. This prevents pipetting errors and minimizes the time in preparation of polyacrylamide gels.

BioLit products, with their consistently accurate results in a wide-range pack sizes, are designed to suit research institutes and educational laboratories, moderate and even small labs.

Our customers can seek any technical queries, clarifications and guidance from our user-friendly QC and customer service departments. Customization queries for select products are always entertained.

In-depth detail of our BioLit[™] products can be availed from our website or at marketing@srlchem.com

BioLit® PCR Products (Taq Polymerase, Buffers & Kits)

BioLit® TAQ Polymerases

Taq DNA Polymerases (offered in different concentrations) are enzymes used in Routine PCR. They are thermostable recombinant DNA polymerases derived from thermophilic bacterium *Thermus aquaticus*. They can amplify DNA target up to 5 kb (simple template) and have a 5' to 3' polymerase activity but lack 3' to 5' exonuclease activity that result in a 3'-dA overhang PCR product.

BioLit® Routine PCR

Applications - PCR amplification of DNA fragments as long as 5 kb, DNA labeling, DNA sequencing, PCR for cloning.

			1000 units	4500.00
			5000 units	20500.00

A Thermostable recombinant DNA polymerase, useful in amplification of DNA fragments upto 6 kb from genomic DNA with high purity and specificity. Sources of template - plant genomic DNA, mouse cDNA, bacterial colony DNA, bacterial plasmid DNA, viral DNA and zygosity PCR templates. No loading buffers or tracking dyes required. Samples may be added directly to an agarose gel after PCR and visualized.

Other different polymerases described below are useful when there is a need for higher specificity for primer incorporation, high fidelity with proof reading capability, amplifying long and complex templates & need for efficient and fast elongation, and DNA Polymerase which is suitable for Hot Start PCR. The polymerases here each have one of these features and can be chosen to suit the needs of the researcher.

BioLit® Hot Start PCR

This product is a DNA Polymerase coated with antibody, which is suitable for Hot Start PCR. There is no activity of this enzyme at room temperature, and the antibody can be inactivated rapidly at 70°C or above. This ensures that the enzyme is active only during PCR and prolonged heating or denaturation steps can be avoided.

BioLit® Ready-to-use DNA Molecular Weight Standards

BioLit DNA markers come in many useful ranges to cover most of the requirements of researchers and students. The markers are provided in a ready-to-use format for convenience and high reproducibility. We recommend a volume of 10 µL (~1 µg total DNA) per load to ensure that distinct, prominent DNA bands are observed even with a less sensitive UV transilluminator or in a less than optimal dark chamber. Users might be able to load a volume less than that recommended (without compromising results) if a high-sensitivity gel documentation system is available.

The markers have been carefully prepared under sterile conditions and stored in 10 mM Tris-HCl, pH 7.5, 1 mM EDTA and 1 mg/ml sodium azide and are unstained markers. Stocks will be stable for several months if properly stored frozen or even refrigerated.

BioLit® Ready-to-use Unstained Protein Molecular Weight Standards

BioLit protein molecular weight standards cover the useful range of protein sizes that a researcher or student requires for routine experiments. The recommended loading volume is 20 µl, giving approximately 5 µg of each protein sufficient for detection by Coomassie blue staining. The products are unstained markers. The proteins have been dissolved and denatured in the standard SDS-PAGE sample-loading buffer. Prepared under sterile conditions, these markers have appropriate additives to ensure long-term stability when they are stored in a refrigerator or freezer and even with brief exposure to room temperature. Although boiling is not required prior to loading, doing so will not affect results.

Pharmacopoeial Products (IP/BP/USP/NF)

We take pride in introducing a select range of pharmacopoeial grade products according to IP/BP/USP/NF to meet the critical requirements of the pharmaceutical and biotech industries for drug manufacture and diagnostics use.

These products have stringent limits of purity and impurities, often more critical than specified in the pharmacopoeial standards. This will enable the niche pharmaceutical manufacturers to obtain very high quality raw material ingredients indigenously.
